Description

Ultraglide Indoor Roller Skate Wheels!
The Ultraglide Indoor Roller Skate Wheel is built for skaters who crave speed, precision, and control on the rink. Designed with Bont's latest high-speed urethane formula and a polished 6061 aluminum hub, this wheel delivers exceptional roll, grip, and responsiveness. Whether you're a speed skater, jam skater, or session skater, the Ultraglide is engineered to keep you gliding fast and smooth on any indoor surface.

Key Product Points:
Speed Urethane: Developed by Bont for ultra-fast indoor performance with exceptional rebound and roll.
Aluminum Hub: Aircraft-grade 6061 aluminum hub provides unmatched strength and stability.
Multi-Purpose Performance: Perfect for speed skating, jam skating, shuffle skating, and all forms of session skating.
Surface Versatility: Performs on wood, coated concrete, and sport court floors.

Designed for Speed and Precision!
The Ultraglide Indoor Roller Skate Wheel represents a new evolution in Bont's performance wheel lineup. Engineered with our latest Speed Urethane compound, this wheel is built to help skaters reach top speeds while maintaining stability through every stride and turn. The urethane's high rebound properties ensure you get maximum energy return from each push, allowing you to skate faster and longer with less effort.

At 96A hardness, the Ultraglide is ideal for indoor surfaces where grip and roll must be perfectly balanced. You'll feel the wheel accelerate easily underfoot, maintaining consistent traction without unnecessary drag. Whether you're sprinting down straightaways or executing tight spins on the jam floor, the Ultraglide provides a smooth and fast ride every time.

Aircraft-Grade Aluminum Hub
At the core of every Ultraglide wheel is an aircraft-grade 6061 aluminum hub. This precision-engineered hub ensures structural integrity and consistent roll, even under the most demanding skating conditions. The aluminum hub not only improves responsiveness and stability but also enhances energy transfer between your push and the floor. Each hub is electroplated in silver, giving the wheel a mirror-like finish that looks as fast as it performs. The polished surface adds a touch of premium style that stands out under the rink lights, matching its professional-level performance with a sleek aesthetic.

Built for Versatility
Although optimized for speed, the Ultraglide's performance characteristics make it an exceptional all-around indoor wheel. It transitions seamlessly between speed sessions, jam skating, and shuffle skating. The combination of precise hardness and advanced urethane chemistry ensures the perfect blend of grip, roll, and slide when needed.

If you're skating on wood, coated concrete, or sport court surfaces, you'll experience consistent performance across all indoor conditions. The wheel's reliable traction makes it ideal for skaters who switch between different rinks or skating styles but demand the same high performance every time.

Advanced Speed Urethane Formula
Bont's Speed Urethane formula is the result of extensive testing and development. Designed to maximize roll without compromising grip, it allows skaters to reach higher speeds with less energy expenditure. The urethane layer measures 6.5mm thick, providing just the right amount of cushion and durability for long-term use. This advanced formulation resists chunking and flat spotting, maintaining a consistent surface profile even after intense skating sessions. Combined with the rigid aluminum hub, the urethane stays firmly bonded, ensuring a long-lasting, reliable performance.

Consistency and Control
Every Ultraglide wheel is manufactured to tight tolerances for precise balance and roundness. This attention to detail ensures you get a wheel that feels stable and responsive at all speeds. The lightweight aluminum hub also helps reduce rotational mass, improving acceleration and deceleration control, especially important for competitive speed and jam skaters.

Perfect for Competitive and Recreational Skaters
From local rink nights to high-intensity training sessions, the Ultraglide wheel adapts to your style. Its combination of speed, grip, and visual appeal makes it a favorite among competitive speed skaters and freestyle performers alike. If you're looking for a wheel that delivers uncompromising roll and reliability, the Ultraglide is your new go-to choice. Take your indoor skating to the next level with the Ultraglide Indoor Roller Skate Wheel, engineered for speed, precision, and pure fun.

Technical Specifications:

Wheel Diameter: 63mm
Wheel Width: 44mm

Hardness: 96A
Urethane Thickness: 6.5mm
Hub Material: Aircraft-grade 6061 aluminum
Hub Finish: Electroplated silver (high polish)
Surface Compatibility: Wood, coated concrete, sport court
Use Type: Indoor
Sold As: 8-pack

Frequently Asked Questions:

1. Is the Ultraglide suitable for all indoor surfaces?
Yes. The Ultraglide performs exceptionally on wood, coated concrete, and sport court surfaces, making it ideal for most indoor rinks and arenas.

2. What type of skating is this wheel best for?
The Ultraglide is designed for speed skating, jam skating, shuffle skating, and general session skating. Its 96A hardness offers a great mix of grip and roll for fast, controlled performance.

3. Can I mix Ultraglide wheels with other Bont wheels?
You can, but for best performance and balance, it's recommended to use a full set of Ultraglide wheels to ensure consistent grip, speed, and response across all four corners of your setup.

These high-performance wheels are not designed for drag-to-stop use. Flat spotting from excessive dragging or hub damage from incorrect bearing installation is not covered under warranty. Flat spotting is a characteristic of urethane under excessive friction and can occur on all roller skate wheels.

NOTE: *The BONT UltraGlide Wheels use standard 8mm 608 bearings.*
