Description

The GREASE Wheels are the forerunner of Roll-lines current ICE wheels. GREASE was the former best dance wheel available, and used by more World Champions than any other wheel. Made in Italy by Roll-Line. Set of 8 Cast Urethane BiCompound Formula wheels excellent on any

indoor Roller Skating surface. Manufactured with Tight Grip and Super Roll properties, resulting in one of the lightest, tightest, and best rolling wheels available. Available in three hardnesses. The outside face of the Hubs on GREASE wheels are Silver Chromed, while the colour of the back side of the hub identifies the hardness of the wheel. It is recommended to use spacers in the wheels.
Available in a 63mm diameter with a 30mm tread width in 97A (like North American 103A), AND 95A (like North America 101A) - usually recommended for grippy urethane coated surfaces or hard terrazzo floors with skater weight 175+ lbs.

• **NOTE:** The NEW 95A wheels in the pull-down menu are brand new but have some yellowing due to age which happens over time as a natural result of the urethane. Same yellowing appears on the the Lightly Used 95A and 97A wheels, which are sold at a discounted price.
